

BUMPERS	25
----------------	-----------

Bumpers are furnished and bolted to both ends of the end truck as standard. Bumpers are rubber or polyurethane, depending on the size of bumper required. The bumper size for each crane is selected case by case. Bumpers are specified as part of the (crane) end truck ordering code.

Bumpers, similar to those used on end trucks, are furnished and bolted to both monorail and double girder trolleys as standard.
